Dear Erasmus+ Project Partners,

You are invited to a final meeting of all the partner schools in Puck, Poland, from Monday 30<sup>th</sup> May to Friday 3<sup>th</sup> June 2022. I am looking forward to your coming and enjoying the time here with you.

Proposed ideas connected with a programme for the meeting in Poland:

In the last mobility in Poland both students and teachers will be involved in lessons, workshops, field trips and activities which will extend our knowledge about the specific region on the Baltic coast, Kashubian one, its traditions, culture and the Kashubian language - a local ethnic-minority language officially recognised since 2005, spoken by some 100,000 people. Moreover, we will focus on environmental problems, the fauna and flora of the Baltic Sea participating in lectures in the Marine Institute of Oceanography in Hel and Puck. Our Communicative and IT skills will be improved and successfully used during meetings, writing a newsletter on etwinning platform and working on the Manual of Good practice, our essential final outcome. We will exchange our knowledge and experience and share our materials with local community, on the blog, etwinning and in a regional newspaper. In addition, our meeting might be broadcast in a local television. We will try to disseminate all our products to underline the values of the project.

All our activities are transparently connected with the mobility and some of them will be presented during our meeting. The lessons, trips and activities will be focused on main topic of sustainability and integrated with a lesson plan. During the mobility we will celebrate The World Environment Day discussing the importance of the environment protection in workshops and discussion groups. The field trips to Hel peninsula and the coastal area of this part of the Baltic Sea will help students understand and witness the impact of World War II on the local environment with ecological damage hidden under the sea level where sunken war ships represent a huge threat to the sea ecosystem. We will take advantage of this last mobility to celebrate here our two-year partnership and conclude our work, evaluate the project collaboration and prepare for the publication of Manual of Good Practice.

This activity is the culmination of previous online collaborative work on Twinspace and other online tools. The period before the mobility will be used to study various forms of being "green" for the purpose of sustainability. For example we will learn about using ecologic means of transport in each partner country (bikes, trains, eco buses, boats etc.) and compare data online. Students will study the use of bicycles as a means of transport to their schools and compare the results. World Oceans Day will be celebrated during the mobility so beforehand we will investigate online and in libraries or local institutions to be able to discuss the findings during the meeting in Poland. This might be very interesting because 3 of the 5 partner schools have access to 3 different seas: The Baltic, The Black Sea and the Mediterranean. The only two landlocked countries will learn a lot from the other three schools. Czech partner school might inform others of the plan to build the Danube-Oder-Elbe Canal to connect the Black Sea with the Baltic Sea and discuss its benefits or threats to the ecology and sustainable development. Students will work on the regular newsletter (like after each mobility) which will be made as usual in a collaborative way using a shared Google doc published on Twinspace so that the public can make use of all the gathered information and findings related to the topic, issues and tasks planned and precisely sorted out during our last meeting.

The involved participants will have the opportunity to get familiar with the local landscape on the coast of the Baltic Sea, local traditions connected to the marine life, typical jobs and

cuisine influenced by the direct access to the sea, local dialect/language called Kashubian together with the related art. The region where the Polish partner school is situated is strongly affected by the sea proximity so the participants will be able to see how it influences the environment, the employability and thus the importance of keeping the sea clean for the future generations so that they can also benefit from it. Lots of families here rent their homes or rooms to tourists who come here to enjoy the warm summer days on the beach. Without clean sea there would be no tourists and less employment - the students will see it with their own eyes. We will also experience a cross-curricular connection between ecology and history when we discuss the influence of World War II on the sea ecosystem here with lots of sunken war ships around Gdansk causing a huge ecology threat if the tanker shipwreck leaks its hold of petrol. All our skills will be improved during the meeting both IT, communicative or language ones. We will exchange the fundamental values about our culture, language and regions. We will become more aware of the topic of sustainability to keep our fragile environment clean, safe and healthy for the future generations.

### **Sunday 30 th May 2022**

Arrival and accommodation in Aparthotel in Puck 29 th Sunday( coming SK, Cz, RO,) leaving Saturday 4<sup>th</sup>

<https://apartamenty-kamienica.pl/#home>

#### **Kamienica**

Morska 9 84-100 Puck Apartamenty Kamienica
